- Python
- ROS (Robot Operating System)
- Git (GitHub)
- C and C++
- Linux
- C# (Unity and .NET)
- SQL and MongoDB
- Docker

ACTIVITIES

Since my childhood, I have been passionate about programming. I was a member of CoderDojo for many years and won the Most Technical Award at Coolest Projects in 2017. This experience has helped me develop and improve my programming skills. I have always been interested in using my programming skills to solve technological problems and develop new innovative ideas. In August 2023, I became a team member of UGent Racing, where I contribute to the development of a self-driving electric race car, which we compete with against other teams during the summer.
